

Easy Java Assignments

By Pankaj Jagasia

1. Create a class named 'Student' with String variable 'name' , integer variable 'roll_no'. , String variable 'phone_no' and String variable 'address'
 - a. Assign the value of roll_no as '2' and that of name as "John" by creating an object of the class Student.
 - b. Assign and print the roll number, phone number and address of two students having names "Sam" and "John" respectively by creating two objects of class 'Student'.
2. Write a program to print the area and perimeter of a triangle having sides of 3, 4 and 5 units by creating a class named 'Triangle' with constructor having the three sides as its parameters.
3. Write a program to print the area of two rectangles having sides (4,5) and (5,8) respectively by creating a class named 'Rectangle' with a method named 'area' which returns the area and length and breadth passed as parameters to its constructor.
4. Print the sum, difference and product of two complex numbers by creating a class named 'Complex' with separate methods for each operation whose real and imaginary parts are entered by user.
5. Write a program that would print the information (name, year of joining, salary, address) of three employees by creating a class named 'Employee'. The output should be as follows:

Name	Year of joining	Address
Robert	1994	64C- WallsStreat
Sam	2000	68D- WallsStreat
John	1999	26B- WallsStreat
6. Write a program by creating an 'Employee' class having the following methods and print the final salary.
 - 1 - 'getInfo()' which takes the salary, number of hours of work per day of employee as parameter
 - 2 - 'addSal()' which adds \$10 to salary of the employee if it is less than \$500.
 - 3 - 'addWork()' which adds \$5 to salary of employee if the number of hours of work per day is more than 6 hours.
