Q1 -

Code :

```
import java.util.*;

public class Result {

    int Student_ID;
    String Student_Name;
    String Subject_Name;
    int Marks_Obtained;
    char Grade;
    String Exam_Date;

    public Result(int student_ID, String student_Name, String subject_Name,
int marks_Obtained, char grade,
        String exam_Date) {
        Student_ID = student_ID;
        Student_Name = student_Name;
        Subject_Name = subject_Name;
        Marks_Obtained = marks_Obtained;
        Grade = grade;
        Exam_Date = exam_Date;
    }

    public int getStudent_ID() {
        return Student_ID;
    }

    public void setStudent_ID(int student_ID) {
        Student_ID = student_ID;
    }

    public String getStudent_Name() {
        return Student_Name;
    }

    public void setStudent_Name(String student_Name) {
        Student_Name = student_Name;
    }

    public String getSubject_Name() {
        return Subject_Name;
    }

    public void setSubject_Name(String subject_Name) {
        Subject_Name = subject_Name;
    }

    public int getMarks_Obtained() {
        return Marks_Obtained;
    }
}
```

```

    public void setMarks_Obtained(int marks_Obtained) {
        Marks_Obtained = marks_Obtained;
    }

    public char getGrade() {
        return Grade;
    }

    public void setGrade(char grade) {
        Grade = grade;
    }

    public static void main(String[] args) {

        System.out.println("Enter Student Data");
        Result obj = new Result(101, "Shubham", "Math", 20, 'B', "25-09-
2026");

    }

}

```

Output :

Q2 -
